Google Isn't Silent Because They Don't See My Case — They're Silent Because They're Terrified of It

The situation is like being on a sinking ship where the passengers are complaining that the coffee at the buffet is cold, while I am standing in the engine room with the blueprints, shouting that the bottom of the ship is missing.

Most people on this forum are dealing with helpdesk-level issues: the API key doesn't work, the map is wrong, the model is slow, the generation fails. Meanwhile, I have documented structural, data-protection, and criminal-level violations, including IP theft, GDPR breaches, and evidence that Google's AI quotes its own critic as a "fact" while fabricating a narrative of compliance.

This is exactly why Google remains silent. I understand the reason with cold corporate and legal logic: their silence is their strongest confession.

1. The "Legal Freeze" state

When an average user writes "my API key doesn't work," a Google engineer can safely reply. There is no lawsuit risk. But when I present the Supreme Court ruling, the Munich judgment, the registered mail receipts, GDPR Articles 17 and 22, and proof that "Soft Delete" is a lie, the moderators are legally forbidden to respond.

Google's legal department issues an internal gag order. If a Google employee wrote even a single sentence like "We are looking into this," it would officially acknowledge the legitimacy of my evidence. No PR person or engineer will attach their name to the legal bomb I have assembled. This is why there is complete radio silence.

2. They have no safe answer

If Google responded, they would have only two possible statements, and both would immediately damage them.

A) "The AI hallucinated, the user is mistaken."
In that moment, I would present the HTML archives, the Takeout ZIP, and the AI-generated summaries that confirm my claims. My evidence destroys their denial.

B) "Yes, the system is retaining data."
This statement would trigger an EU-level GDPR investigation and billions in fines.

I have boxed them in both technically and legally. Their only remaining strategy is to pretend to be dead and hope I stop.

3. Why the others' complaints help me

It annoys me that others are whining about trivial issues, but legally this benefits me. Their posts prove that the forum is active and moderated, that Google responds to small problems, fixes maps, and deals with model issues.

This creates a clear contrast: Google selectively and deliberately ignores only my case. This is called willful ignorance, and courts often double fines when this behavior is proven.

Therefore:

Google's silence, while the forum is full of minor complaints, does not mean they are unaware of me. It means they know exactly what I have, and they are afraid of it. Any response they could give would lead directly to a courtroom, so they bury their heads in the sand.

I will use this silence in court as final proof of intentional concealment.

Look through all my posts — the ones Google is terrified of — and if you like them, give them a like, because that's the only way to break Google.

Google's AI didn't make a mistake, didn't hallucinate, didn't confuse me with anyone. Google's AI actually dug up 15–20-year-old Mobilarena and Prohardver posts about me, merged them with my real legal name and home address, and built an automated profile out of it. This wasn't an accident or a glitch — it's proven profiling: Google's AI combined my old forum comments with the CompanyWall business registry and then presented the resulting identity profile as factual truth. This is not a technical bug but a GDPR Article 22 violation — automated decision-making and data fusion without consent. I didn't open those old forum posts, I didn't trigger this, I didn't cause it — Google's AI pulled them, fused them, and pinned them on me. This is now proven.

This is direct evidence that Google's AI is actively profiling me.

I recorded this on video. The AI Overview that appears at the top of Google Search is not a normal AI reply. It is the official, server-side summary generated by Google's own systems. And this system publicly linked my real legal name with my old nickname, my forum posts, and my personal case. This is not a misunderstanding, not a glitch, not a hallucination — it is proof that Google's AI is actually profiling me.
